A Creative Solution to Expensive Land Costs

Alameda, California...

Where do you store personal belongings in an extremely expensive land environment? In this quaint suburb near the city limits of San Francisco, it is likely that you may need remote storage space.

If you own a storage facility, you face the same challenges in meeting your customer's needs - The high cost of land makes it difficult to expand. That's where the ingenuity of Cubic Designs, Inc. comes in - Providing a creative solution to a real need for Pacific Mini Storage. Faced with an interesting challenge, Cubic Designs, Inc. suggested that Pacific Mini Storage (PMS) consider building up, not out! With an already enclosed facility, Cubic helped PMS design and install a second story mezzanine directly above the existing storage facility. For a reasonably small investment per square foot, PMS was able to essentially double their storage space.

Knowing that there would be a great deal of traffic on the second level, Cubic

helped PMS make a smart decision for their floors by choosing ResinDek… The Panel of Experts SM ResinDek MD was chosen, providing a good mix of strength and economy to the flooring system. Over 54,000 sf was installed directly overhead. The ResinDek

panels, structural steel, and corrugated provided the ceiling for the first level, and the flooring for the second level. "With Resin-Dek MD, we can accommodate foot traffic, and up to 2,700 lbs on a pallet jack," says President Mike Giffhorn. "We feel like we helped our customer make a good value decision for the flooring panels and the entire structure". Cubic Designs is currently exploring the possibility of helping other storage facilities double their space for a minimal additional investment. Cubic Designs is a Strategic Partner and Stocking Distributor of ResinDek Panels, which are manufactured and sold by Cornerstone Specialty Wood Products.

Leave it to the experts to select ResinDek
